

Lawn Grass plantation

June 2010

Panel -Harvest of Malay-Grass

Piles prepared for transportation

Tearing grass panels into small patches and re-plant

- Location: Lam Lukka, Bangkok
- Grass farm grow a variety of Grass type for the market in Housing and Resort buyers.
- Normal growth cycle is 45 days, by Herbagreen this can be reduced by 10 days.
- Critical path is to achieve good and even growth of patched Grasses.
- Herbagreen has been able to improve areas with poor growth and delivers uniform quality.
- Faster and more dense growth but also better roots have been recognized by the farmer.

Critical path in plantation

Between patches, moss growth effect to low density

First spraying of Herbagreen

Un-even growth

Moss and died off grass

Improvement by using Herbagreen

Critical soil, difficult to harvest, poor quality in past

Grass struggles with growth

Well improved after one time spraying

Grass has been harvested after 35 days

Herbagreen with good effect in Grass

B-grade plot

Recovery to A-grade quality

Fast rooting

Good density
